## **NEQOS Back Pain Report**

This back pain report contains health intelligence produced by NEQOS to support the implementation of the national pathfinder project to provide better pathways of care for people with low back and radicular pain. The NHS England Pathfinder Projects were established to address high value care pathways which cross commissioning and health care boundaries. Many conditions require a pathway of care which moves from the general practitioner through primary care and community services and into secondary care and sometimes specialised services. Difficulties in commissioning across boundaries, however, can cause artificial interruptions in what should be a seamless care pathway. The Pathfinder Projects are designed for all Stakeholders to work collaboratively to examine in depth these health care interfaces and to develop commissioning structures to commission care across the whole pathway. The Trauma Programme of Care Board selected low back pain and radicular pain as the Pathfinder Project as this is a high value care pathway in view of the very large number of patients involved.

The future of the pathway is that it is designed to be run in primary care (general practice and community physiotherapy) and referral into secondary specialist care is only at the end of the pathway. Key to the success of the pathway are the Triage and Treat practitioners; the highly trained practitioners, either extended scope physiotherapists or nurse specialists who essentially run the pathway and have access to bookable slots for the core therapies, nerve root blocks, spinal surgical clinic appointments or pain clinic appointments. This reduces very significantly the delays in the previous system and also reduces the "pinball" management that is a feature of so many health care systems. Quality care is less expensive by reducing ineffective or repetitive treatment and by reducing conversion into chronic disability

In this profile, the current utilisation of secondary care services for back and radicular pain are shown by CCG and providers, including both NHS Trusts and Independent Sector providers to demonstrate variation in activity regionally and across England. This report is based on the population of patients under the care of CCGs in the South Central Region and provides important information about patient flows from these CCGs across all providers within this region.

Information on hospital admissions is presented by admission method (elective vs. emergency) and type of procedure (surgery, injections, pain management etc.) undertaken. The aim of this report is to assist both clinicians and commissioners in comparing treatment activity rates between regional providers and against national data to reduce variation and develop evidence based care pathways to improve patient outcomes.

Ongoing monitoring of this secondary care activity will evidence where changes implemented through the national pathfinder project for acute low back and radicular pain to provide timely access to evidence based treatments can improve the quality of patient care, provide community based alternatives to secondary care admissions for back pain and reduce secondary care expenditure.

It is important to note that this report is based on the cohort of patients with back and/or radicular pain but does not include patients who have back pain due to specific diagnosis such as cancer, infection, spinal trauma, inflammatory arthritis, cauda equine syndrome as these patients have very different treatment pathways of care.

## **Acknowledgements**

This work has been funded through the Getting It Right First Time (GIRFT) project that is part of the Department of Health funded Clinically-Led Quality and Efficiency Programme.

Acknowledgements to the Health & Social Care Information Centre (HSCIC) as the source of data used in this report and to Professor Greenough and Mr Ashley Cole for their expert clinical guidance and advice.

## Introduction and background

Low back pain is extremely common and is the largest single cause of loss of disability adjusted life years, and the largest single cause of years lived with disability in England (Global Burden of Disease, 2013). In terms of disability adjusted life years lost per 100,000, low back pain is responsible for 2,313. By contrast the remainder of musculo-skeletal complaints counts for 911, depression 704 and diabetes 337. It should be borne in mind that this is principally occurring in people of working age, or with families. UK specific data shows that LBP was top cause of years lived with disability in both 1990 and 2010 — with a 12% increase over this time. Back pain accounts for 11% of the entire disability burden from all diseases in the UK; furthermore the burden is increasing both absolutely (3.7% increase) and proportionally (7% to 8.5%).

NEQOS have produced CCG and hospital Trust level activity profiles to understand the current position in terms of secondary care activity for back and radicular pain and have worked with a range of key stakeholders from both provider and commissioner organisations to develop the profiles to ensure that the indicators shown are appropriate and relevant to the project. This information needs to be viewed in conjunction with data soon to become available from Arthritis Research UK about the prevalence of back pain and associated risk factors and where possible with locally available data from general practice, including prescribing rates, and onward referrals from primary care (e.g. physiotherapy and radiology).

## Technical specification

Following a data discovery exercise supported by Professor Charles Greenough (National Clinical Director for Spinal Disorders, South Tees NHS Foundation Trust), definitions for low back and radicular pain were developed based on a combination of diagnosis codes (ICD-10) and relevant secondary care procedures were identified using OPCS 4.7 codes. These codes have been supported by Mr Ashley Cole, Chair of Specialised Spinal Surgery Clinical Reference Group (Consultant Orthopaedic Surgeon, Northern General Hospital and Sheffield Children's Hospital).

#### **Data definitions**

Data Source: Hospital Episode Statistics (Health & Social Care Information Centre via HDIS). Please note that 2014/15 data is currently classed as provisional.

CCG populations: Health & Social Care Information Centre (Ages 15 & over as at April 2015) (Data was provided in 5 year ages bands, therefore we were unable to use exact figures for Ages 16 & over)

A summary of the data definitions used is shown below:

Time period: April 2011 - March 2015

Primary diagnosis = back pain (specific ICD10 codes)

Limited to episode 1 Age 16 years and over

Private patients are included unless specified

Admission costs are based on the national tariff

Directly Age & Sex Standardised Rates use the European Standard Populations

The NHS Trusts included for the South Central Region are:

- Frimley Health NHS Foundation Trust
- Buckinghamshire Healthcare NHS Trust
- Royal Berkshire NHS Foundation Trust
- Gloucestershire Hospitals NHS Foundation Trust
- Oxford University Hospitals NHS Trust
- · Royal United Hospitals Bath NHS Foundation Trust
- Salisbury NHS Foundation Trust
- Great Western Hospitals NHS Foundation Trust

The Independent Sector Providers included for the South Central Region are:

- Circle Reading Hospital
- BMI Bath Clinic

## Clinical Commissioning Group (CCG) activity summary

- 1. Hospital admissions for low back and radicular pain in people aged 16 years and over (April 2014 March 2015), summary
- a. Hospital admissions at national level, indicating back pain type and admission method

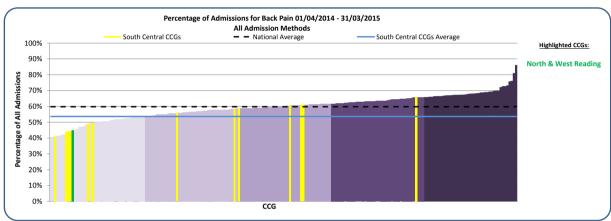

| England   | Back    | Radicular | Total   | % Back | % Radicular |
|-----------|---------|-----------|---------|--------|-------------|
| Elective  | 134,448 | 102,808   | 237,256 | 56.7%  | 43.3%       |
| Emergency | 39,331  | 14,309    | 53,640  | 73.3%  | 26.7%       |
| Other     | 771     | 951       | 1,722   | 44.8%  | 55.2%       |
| Total     | 174,550 | 118,068   | 292,618 | 59.7%  | 40.3%       |

| South Central |       |           |        |        |             |
|---------------|-------|-----------|--------|--------|-------------|
| CCGs          | Back  | Radicular | Total  | % Back | % Radicular |
| Elective      | 6,759 | 6,654     | 13,413 | 50.4%  | 49.6%       |
| Emergency     | 1,931 | 855       | 2,786  | 69.3%  | 30.7%       |
| Other         | 51    | 38        | 89     | 57.3%  | 42.7%       |
| Total         | 8,741 | 7,547     | 16,288 | 53.7%  | 46.3%       |

b. Hospital admissions at CCG level, indicating proportion of admissions for back pain

Table indicates the proportion of admissions for back pain only (and not radicular pain)

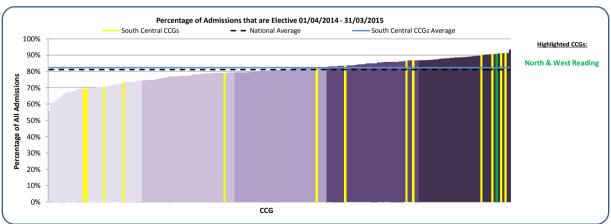

| Swindon                    | 41.2% | Bracknell & Ascot           | 55.9% |
|----------------------------|-------|-----------------------------|-------|
| Newbury & District         | 44.1% | Slough                      | 58.5% |
| South Reading              | 44.1% | Gloucestershire             | 58.8% |
| Wokingham                  | 44.4% | Chiltern                    | 60.7% |
| North & West Reading       | 44.8% | Aylesbury Vale              | 60.9% |
| Wiltshire                  | 48.9% | Oxfordshire                 | 61.0% |
| Bath & North East Somerset | 49.6% | Windsor, Ascot & Maidenhead | 65.7% |
| South Central CCGs         | 53.7% | England                     | 59.8% |

c. Hospital admissions at CCG level, by admission method

Table indicates the proportion of admissions for back and radicular pain that is recorded as elective

| Oxfordshire                 | 69.5% | Chiltern                   | 86.5% |
|-----------------------------|-------|----------------------------|-------|
| Swindon                     | 69.5% | Aylesbury Vale             | 86.7% |
| Slough                      | 70.5% | South Reading              | 90.0% |
| Windsor, Ascot & Maidenhead | 73.3% | Bath & North East Somerset | 90.6% |
| Gloucestershire             | 79.1% | North & West Reading       | 90.7% |
| Wiltshire                   | 82.4% | Wokingham                  | 91.0% |
| Bracknell & Ascot           | 83.5% | Newbury & District         | 91.2% |
| South Central CCGs          | 82.3% | England                    | 81.1% |

#### What is the data telling us?

In the latest 12 month period there were almost 300,000 admissions for back and radicular pain in England, with 16,288 (5.6%) of these from patients registered within the South Central CCGs included in this report.

At a national level the proportional split for hospital admissions is 60% for back pain and 40% for radicular pain, and at CCG level in South Central the proportion of admissions for back pain ranges from 41.2% to 65.7%.

Approximately 81% of back and radicular pain admissions are elective, with the South Central mirroring the national rate. At CCG level in the South Central region the proportion of elective admissions ranges from 69.9% in Oxfordshire to 91.2% in Newbury and District.

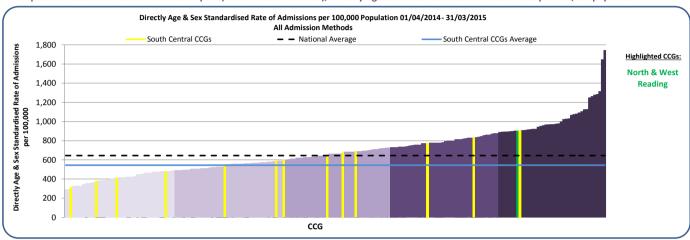

## **Clinical Commissioning Group (CCG) activity**

2. Hospital admissions for low back and radicular pain in people aged 16 years and over (April 2014 - March 2015)

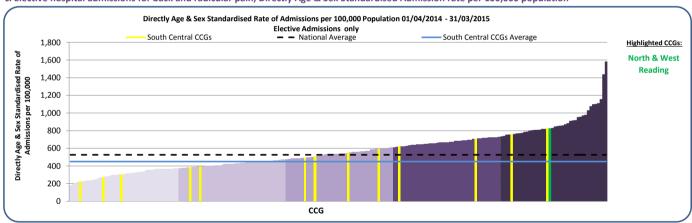

a. Hospital admissions for back pain by CCG (all admission methods), Directly Age & Sex Standardised Admission rate per 100,000 population

| CCG name                   | All   | Elective | Emergency | CCG name                    | All   | Elective | Emergency |
|----------------------------|-------|----------|-----------|-----------------------------|-------|----------|-----------|
| South Reading              | 909.1 | 824.4    | 84.3      | Wiltshire                   | 599.6 | 491.9    | 104.6     |
| North & West Reading       | 906.0 | 825.7    | 79.3      | Chiltern                    | 590.1 | 510.8    | 78.2      |
| Newbury & District         | 834.3 | 758.6    | 73.9      | Slough                      | 542.1 | 393.4    | 146.4     |
| Wokingham                  | 775.3 | 705.6    | 68.8      | Gloucestershire             | 480.8 | 382.0    | 92.4      |
| Aylesbury Vale             | 687.9 | 594.0    | 93.3      | Windsor, Ascot & Maidenhead | 414.5 | 303.8    | 109.3     |
| Bath & North East Somerset | 680.9 | 618.1    | 59.2      | Swindon                     | 378.5 | 270.2    | 108.3     |
| Bracknell & Ascot          | 654.2 | 550.9    | 102.5     | Oxfordshire                 | 313.9 | 221.7    | 89.4      |
| South Central CCGs         | 544.2 | 450.1    | 91.2      | England                     | 645.6 | 526.5    | 115.4     |

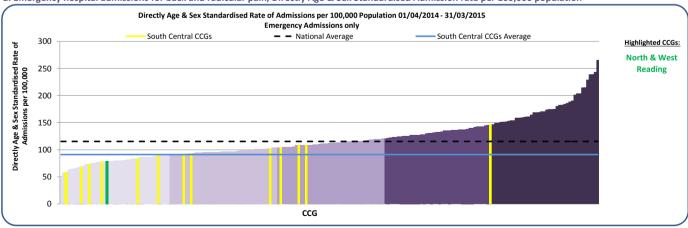

b. Hospital admissions for back and radicular pain (all admission methods), Directly Age & Sex Standardised Admission rate per 100,000 population

c. Elective hospital admissions for back and radicular pain, Directly Age & Sex Standardised Admission rate per 100,000 population

d. Emergency hospital admissions for back and radicular pain, Directly Age & Sex Standardised Admission rate per 100,000 population

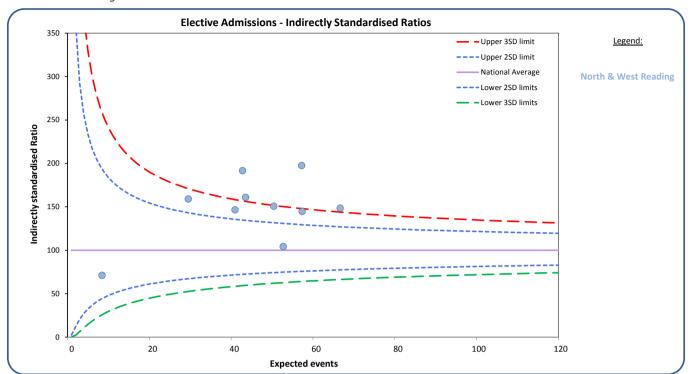

#### What is the data telling us?

There is wide variation in elective admission rates across the CCGs within South Central with over a 3.7-fold difference between the regional lowest (Oxfordshire CCG) and the highest CCG for the region (North and West Reading CCG). Similarly, for emergency admissions there is wide variation across the CCGs in the region with all South Central CCGs, except Slough CCG, below the national average; 7 CCGs in the lowest quintile.

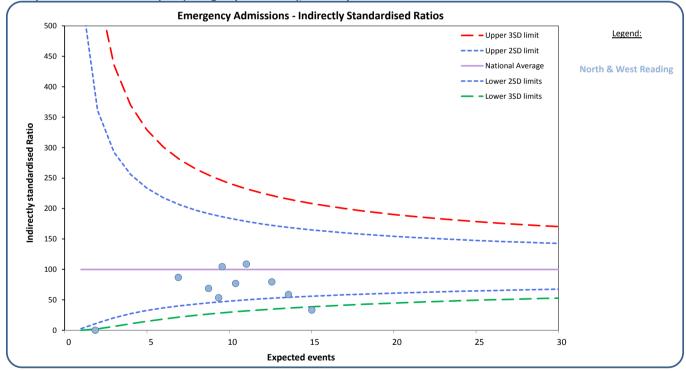

## Clinical Commissioning Group (CCG) activity - GP practice level

- 3. Hospital admissions for low back and radicular pain in people aged 16 years and over (April 2014 March 2015)

  Each symbol represents one GP practice
- a. Hospital admissions for back pain (Elective admissions), Indirectly Standardised Ratio North & West Reading

b. Hospital admissions for back pain (Emergency admissions), Indirectly Standardised Ratio

#### What is the data telling us?

The admission rates for elective and emergency admissions for each GP practice within the CCG are expressed as Indirectly Standardised Ratios with 100 representing the national average. This adjustment has been made due to small numbers and in order that comparisons can be made between practices.

The upper and lower confidence limits on the funnel charts above are based on national data. Each circle represents the constituent GP Practices for the selected CCG(s). All GP practices within the funnel have admission rates that are not significantly different that the national rates with those above the upper blue funnel having significantly higher rates than the national average.

# 4. Indirectly Standardised Ratios for Elective & Emergency Admissions for Back & Radicular Pain, by GP Practice North & West Reading

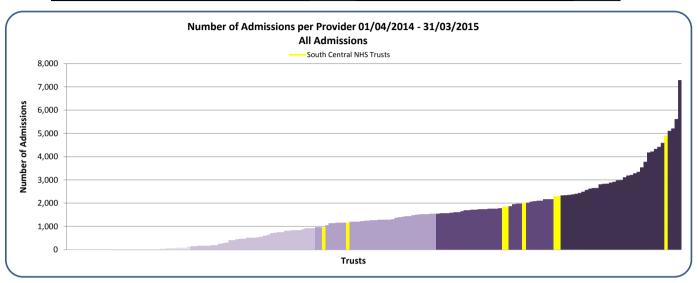

Indirectly Standardised Ratios that are coloured Red are higher than 3 standard deviations from the mean. Those coloured Yellow are between 2 and 3 higher standard deviations from the mean.

5. Hospital admissions for low back and radicular pain in people aged 16 years and over (April 2014 - March 2015)

a. Number of hospital admissions for back pain (all admission methods, NHS Trusts only)

| Frimley                  | 4,899  | Bath          | 1,837   |
|--------------------------|--------|---------------|---------|
| Buckinghamshire          | 2,302  | Oxford        | 1,830   |
| Royal Berkshire          | 2,283  | Salisbury     | 1,157   |
| Gloucestershire          | 2,011  | Great Western | 966     |
| South Central NHS Trusts | 17,285 | England       | 251,444 |

b. Number of admissions per hospital Trust, by admission method (South Central Providers only)

## What is the data telling us?

The total number of admissions for back pain is presented due to the absence of a relevant denominator at hospital Trust level. Activity for the 8 NHS Trusts is to some degree proportional to the size of the Trust and is spread across the quintile chart.

The proportion of hospital activity for back pain which is classed as elective care is slightly higher than England for the South Central providers overall, however at NHS Trust level the proportion varies between 65% at Great Western to 89% at Buckinghamshire.

All NHS activity at independent sector providers is classed as elective.

5. Hospital admissions for low back and radicular pain in people aged 16 years and over (April 2014 - March 2015) c. Elective admissions for back and radicular pain, by treatment specialty (South Central Providers only)

|                         | Pain         |              |                |                |              |                 |        |

## What is the data telling us?

For elective activity the treatment specialty code indicated within the hospital data varies by hospital trust. Overall the most common specialties are trauma and orthopaedics and pain management/anaesthetics, however for Oxford Hospitals the highest volume of activity is recorded within pain management/anaesthetics and spinal surgery service.

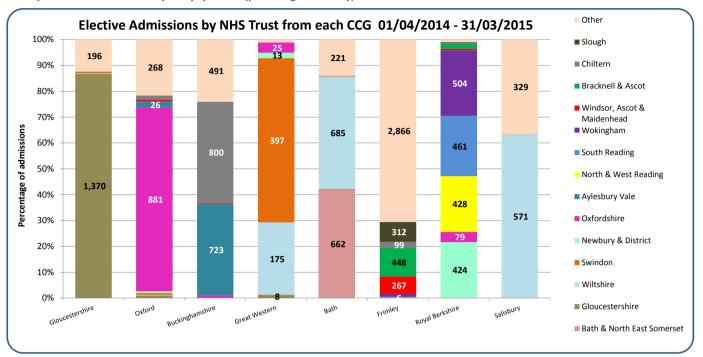

The second table shows the different types of injections being undertaken within each of the treatment function codes and demonstrates that nationally over 62% (104,751) of injections take place within Pain Management/Anaesthetics and 25% of injections are undertaken within Trauma and Orthopaedics.

The most common injection type is facet joint injections, which mainly take place within Pain Management/Anaesthetics treatment function, but are also being used in Trauma and Orthopaedics, Spinal Surgery Service and Neurosurgery.

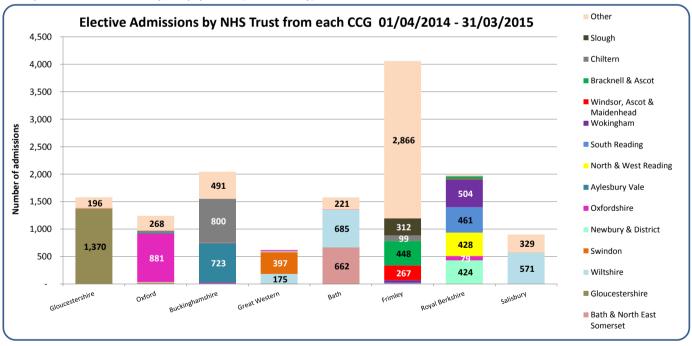

## **Hospital Trust activity from CCGs**

6. Patient flows from CCG to Hospital Trust for back and radicular pain in people aged 16 years and over (April 2014 - March 2015)

a. Hospital elective admissions by CCG population (percentage of activity)

b. Hospital elective admissions by CCG population (actual activity)

#### What is the data telling us?

There is variation between hospital trusts in terms of the number of patients from each of the CCGs that are admitted for back and radicular pain.

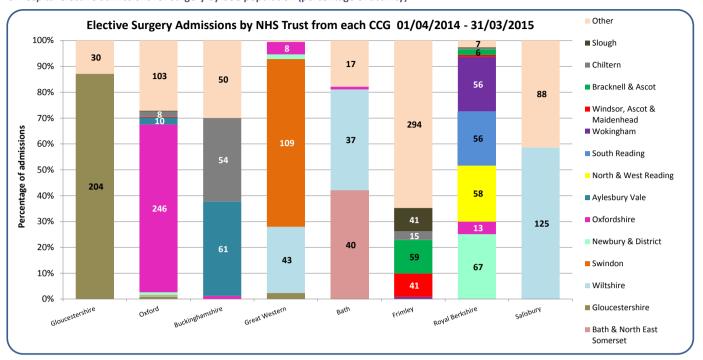

Royal Berkshire hospital have activity from multiple South Central CCGs as does Frimley Hospital even though it is located in a neighbouring CCG to the South Central region. For this reason, the majority of Frimley's activity comes from CCGs not included in this report but in the Trust level data we will report all of Frimley's activity related to back and radicular pain.

The data is shown in two ways, indicating both the proportion and amount of activity relating to each CCG.

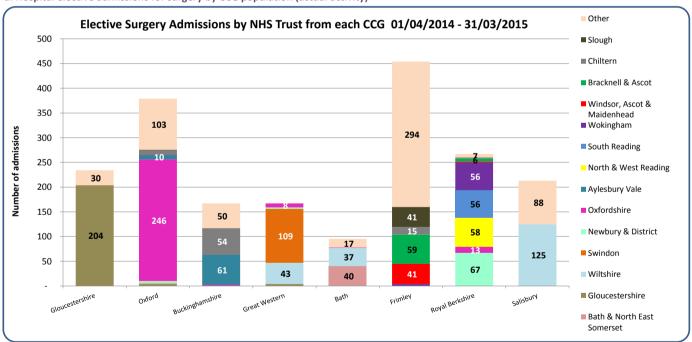

## **Hospital Trust activity from CCGs**

6. Patient flows from CCG to Hospital Trust for back and radicular pain in people aged 16 years and over (April 2014 - March 2015)

c. Hospital elective admissions for surgery by CCG population (percentage of activity)

d. Hospital elective admissions for surgery by CCG population (actual activity)

#### What is the data telling us?

There is variation between hospital trusts in terms of the number of patients from each of the CCGs that are admitted for surgery for back and radicular pain. In the South Central, Oxford and Frimley do the highest volume of spinal surgery.

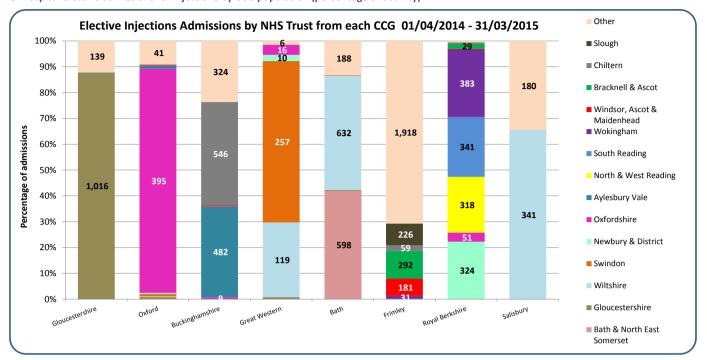

Frimley and Royal Berkshire providers are more likely to take patients from several different CCGs across the region compared to the other Trusts which predominantly admit patients from the CCG(s) where they are located.

The data is shown in two ways, indicating both the proportion and number of admissions relating to each CCG.

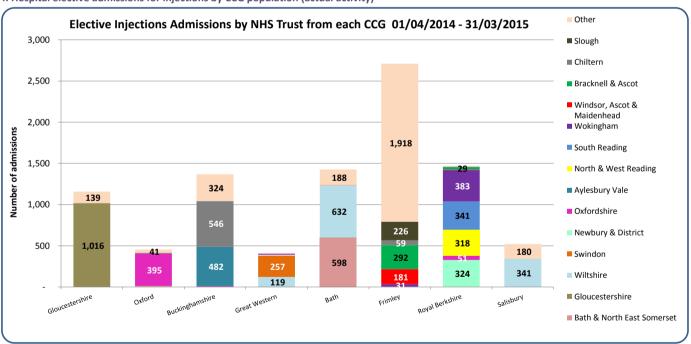

## **Hospital Trust activity from CCGs**

6. Patient flows from CCG to Hospital Trust for back and radicular pain in people aged 16 years and over (April 2014 - March 2015)

e. Hospital elective admissions for injections by CCG population (percentage of activity)

f. Hospital elective admissions for injections by CCG population (actual activity)

#### What is the data telling us?

There is variation between hospital trusts in terms of the number of patients from each of the CCGs that are admitted for injections for back and radicular pain. In the South Central, Frimley do the highest volume of injections.

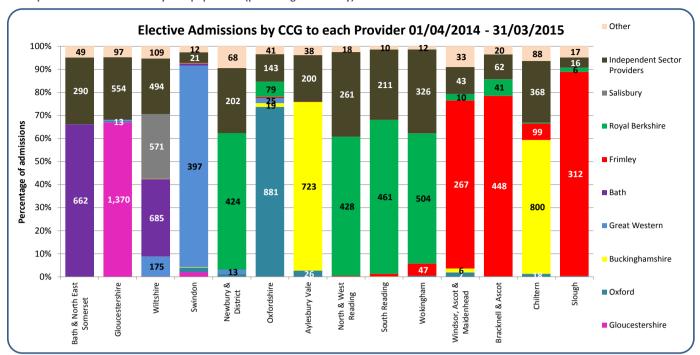

Frimley and Royal Berkshire providers are more likely to take patients from several different CCGs across the region compared to the other Trusts which predominantly admit patients from the CCG(s) where they are located.

The data is shown in two ways, indicating both the proportion and number of admissions relating to each CCG.

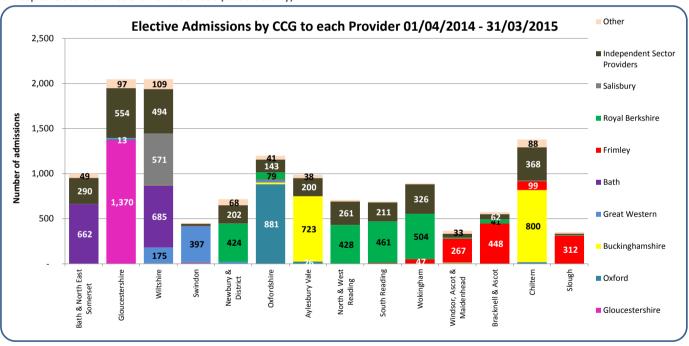

## **CCG** activity to Hospital Trust

7. Patient flows to Hospital Trusts from CCGs for back pain in people aged 16 years and over (April 2014 - March 2015)

a. Hospital elective admissions by CCG population (percentage of activity)

b. Hospital elective admissions from each CCG (actual activity)

## What is the data telling us?

There is variation between CCGs in terms of the number of the number of hospital trusts that their patients are admitted to.

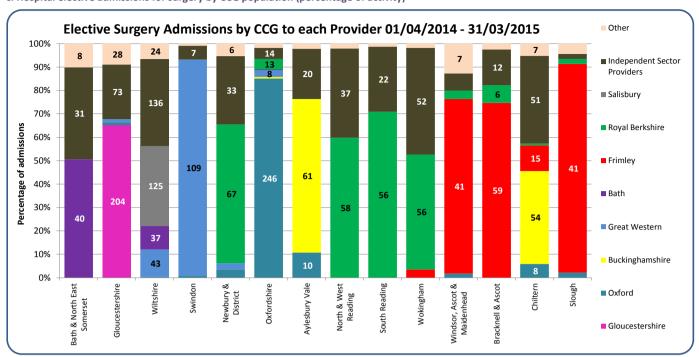

Wiltshire CCG patients attend three of the acute hospital trusts as well as using independent sector providers in contrast to Swindon CCG that uses Great Western and Windsor, Ascot & Maidenhead CCG, Bracknell & Ascot CCG and Slough CCG that use mainly Frimley Hospital.

Activity is highest for Gloucestershire CCG and Wiltshire CCG with high use of Independent Sector providers.

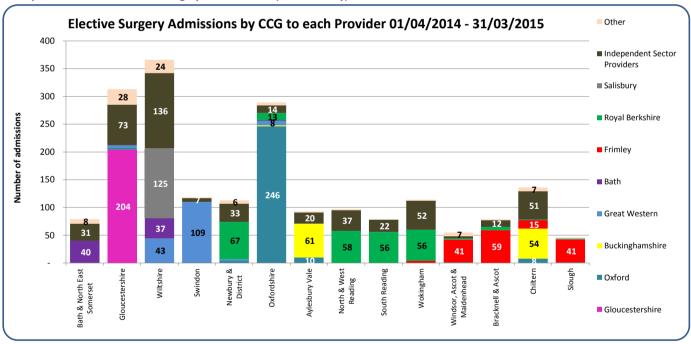

The data is shown in two ways, indicating both the proportion and amount of activity relating to each hospital trust.

## **CCG** activity to Hospital Trust

7. Patient flows to Hospital Trusts from CCGs for back pain in people aged 16 years and over (April 2014 - March 2015) c. Hospital elective admissions for surgery by CCG population (percentage of activity)

d. Hospital elective admissions for surgery from each CCG (actual activity)

## What is the data telling us?

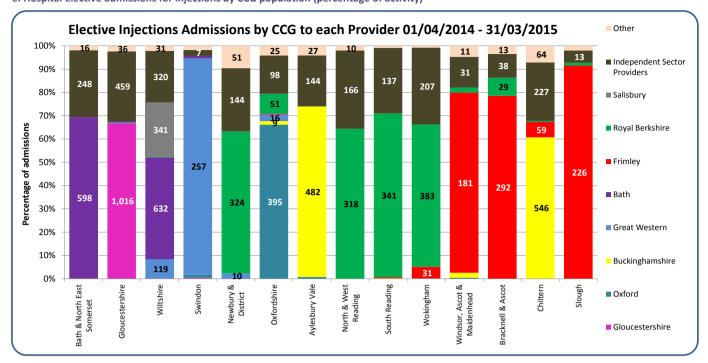

Wiltshire CCG patients attend three of the acute hospital trusts but their greatest spinal surgery activity is with independent sector providers in contrast to Oxfordshire CCG that uses mainly Oxford University Hospital, Swindon CCG that uses mainly Great Western Hospital and Windsor, Ascot & Maidenhead CCG, Bracknell & Ascot CCG and Slough CCG that use mainly Frimley Hospital.

Activity is highest for Gloucestershire CCG and Wiltshire CCG with high use of Independent Sector providers.

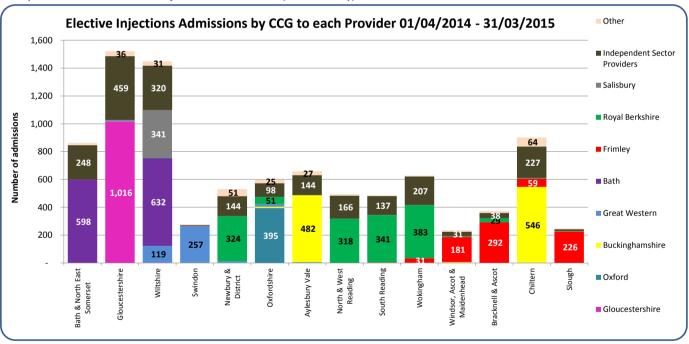

The data is shown in two ways, indicating both the proportion and amount of activity relating to each hospital trust.

## **CCG** activity to Hospital Trust

7. Patient flows to Hospital Trusts from CCGs for back pain in people aged 16 years and over (April 2014 - March 2015) e. Hospital elective admissions for injections by CCG population (percentage of activity)

f. Hospital elective admissions for injections from each CCG (actual activity)

## What is the data telling us?

Wiltshire CCG patients attend three of the acute hospital trusts as well as independent providers for injections in contrast to Swindon CCG that uses mainly Great Western Hospital and Windsor, Ascot & Maidenhead CCG, Bracknell & Ascot CCG and Slough CCG that use mainly Frimley Hospital.

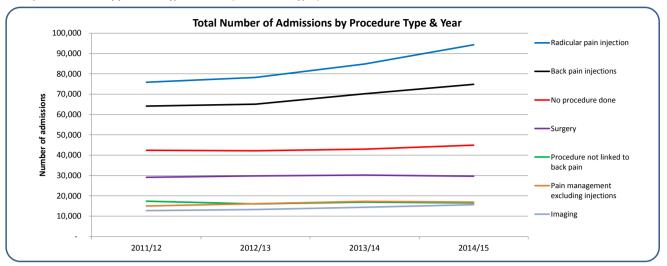

Activity is highest for Gloucestershire CCG and Wiltshire CCG with high use of Independent Sector providers. It should be noted that in South Central region 10 of the 14 Trusts use inpedendent sector providers for injections.

The data is shown in two ways, indicating both the proportion and amount of activity relating to each hospital trust.

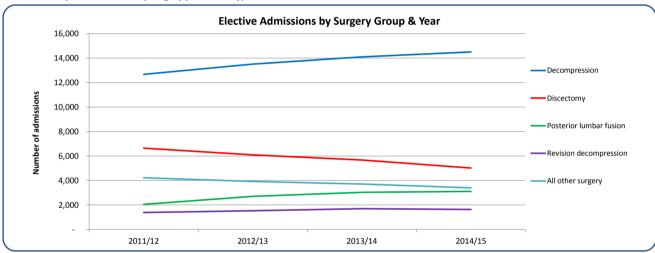

## Hospital Trust activity (national level)

8. Hospital admissions for low back and radicular pain in people aged 16 years and over (1st April 2011 - 31st March 2015)

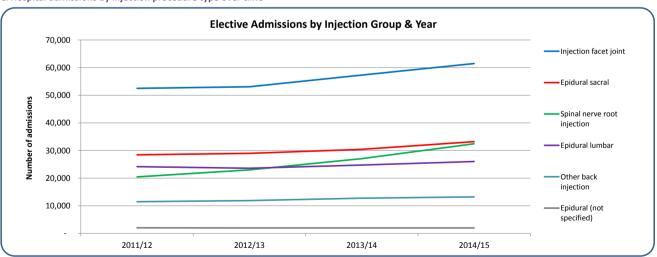

a. Hospital admissions by procedure type over time (all admission types)

b. Elective hospital admissions by surgery procedure type over time

c. Hospital admissions by injection procedure type over time

#### What is the data telling us?

These charts show national trends in the types of procedures undertaken during elective admissions including a group where no procedure was undertaken during their admission. There is also a category listed as 'procedure not linked to back pain' which reports admission activity where there is a primary diagnosis of back pain but with a procedure not linked to back pain.

The main procedure type relating to elective admissions are for back and radicular pain injections which has increased from a combined total of just under 140,000 to 170,000 episodes over the four year period. This is in stark contrast to number of admissions related to surgery which has remained relatively constant at 30,000 admissions per year. The proportion of admissions with no procedure reported has remained at approximately 15-16% of all activity.

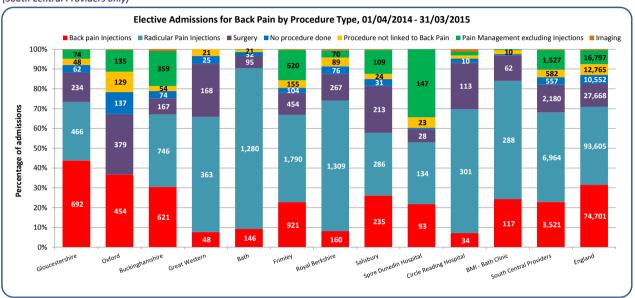

The charts in sections b and c show the elective admissions over time specifically for different groups of surgery procedures and injections.

9. Elective hospital admissions for low back and radicular pain in people aged 16 years and over (April 2014 - March 2015)

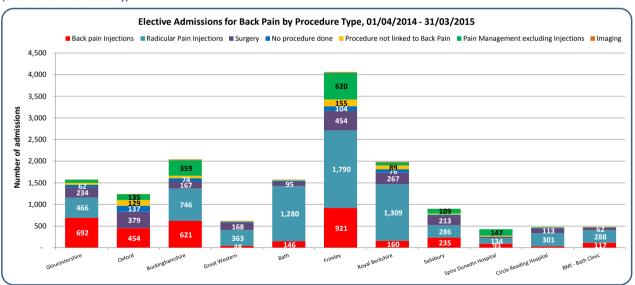

a. Elective hospital admissions by procedure type (national level including all providers)

| Procedure type                       | Back    | Radicular | Total   | %     |
|--------------------------------------|---------|-----------|---------|-------|
| Radicular Pain Injections            | 40,034  | 53,571    | 93,605  | 39.5% |
| Back Pain Injections                 | 62,317  | 12,384    | 74,701  | 31.5% |
| Surgery                              | 3,925   | 23,743    | 27,668  | 11.7% |
| Pain Management excluding Injections | 13,150  | 3,647     | 16,797  | 7.1%  |
| Procedure not linked to Back Pain    | 8,197   | 4,568     | 12,765  | 5.4%  |
| No procedure done                    | 6,060   | 4,492     | 10,552  | 4.4%  |
| Imaging                              | 712     | 373       | 1,085   | 0.5%  |
| Other Non-Surgical                   | 53      | 30        | 83      | 0.0%  |
| Total                                | 134,448 | 102,808   | 237,256 | 100%  |

b. Number of elective admissions per hospital Trust, by procedure type (percentage of activity) (South Central Providers only)

c. Number of elective admissions per hospital Trust, by procedure type (actual activity) (South Central Providers only)

## What is the data telling us?

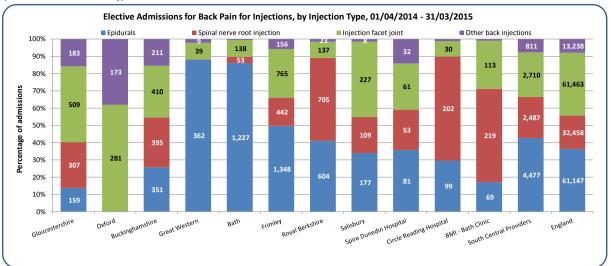

The table shows the number of procedures done in the latest 12 month period, by procedure type, with injections being the most common elective procedure. Nationally only 4.4% of elective admissions have no procedure recorded (compared to 15-16% of all admission types - see previous sheet).

On average, there is a higher proportion of admissions for surgery across South Central providers. Three of the South Central Trusts have a higher proportion of elective activity for injections than the England rate and it is possible that the variation is due to differences in the point of delivery of care across hospital Trusts (for example it is possible that activity may also take place as outpatient procedures).

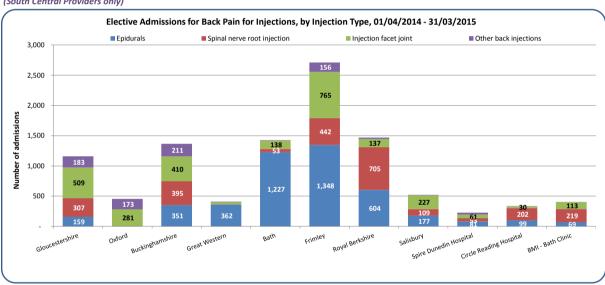

The data is shown in two ways, indicating both the proportion and amount of activity relating to each procedure.

9. Elective hospital admissions for low back and radicular pain in people aged 16 years and over (April 2014 - March 2015) d. Number of elective admissions for injections per hospital Trust, by injection type (percentage of activity)

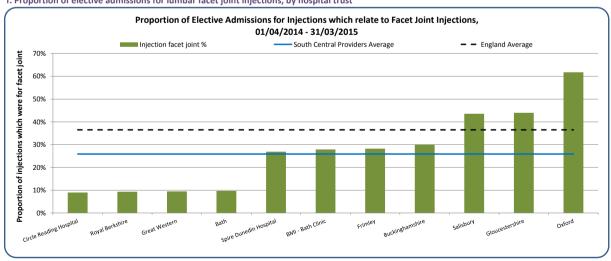

(South Central Providers only)

e. Number of elective admissions for injections per hospital Trust, by injection type (actual activity) (South Central Providers only)

f. Proportion of elective admissions for lumbar facet joint injections, by hospital trust

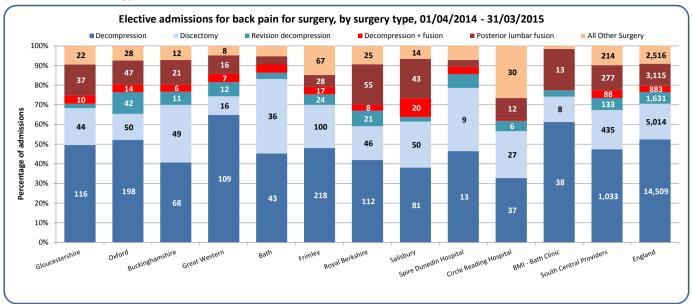

## What is the data telling us?

Injections for radicular pain (i.e. epidurals and spinal nerve root joint injections) are those most frequently done within the South Central region, constituting around two-thirds of all injection activity compared to 57% across England as a whole.

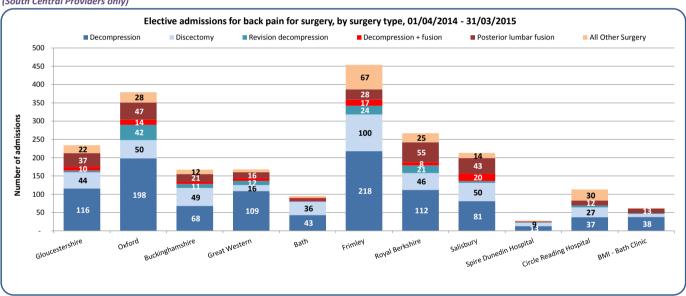

The data is shown in two ways, indicating both the proportion and amount of activity relating to each CCG.

The proportion of facet joint injections done at Trust level ranges from 9% to 62% compared to the England figure of 37%.

9. Elective hospital admissions for low back and radicular pain in people aged 16 years and over (April 2014 - March 2015) g. Number of elective admissions for surgery per hospital Trust, by surgery type (percentage of activity) (South Central Providers only)

h. Number of elective admissions for surgery per hospital Trust, by surgery type (actual activity) (South Central Providers only)

## What is the data telling us?

The charts above show the range in activity relating specifically to elective admissions for surgery, by type of surgery, for the South Central Trusts.

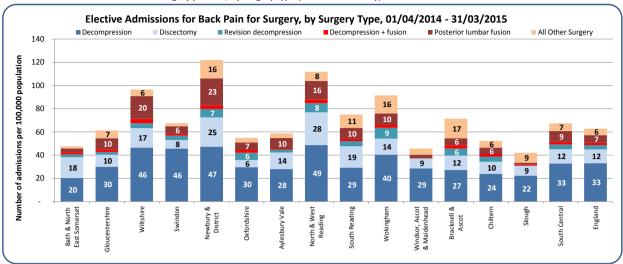

South Central providers combined do a higher proportion of spinal fusions compared to England and there are variations at Trust level. Although decompression is the most common surgical procedure for back pain across providers.

The data is shown in two ways, indicating both the proportion and amount of activity relating to each surgery type.

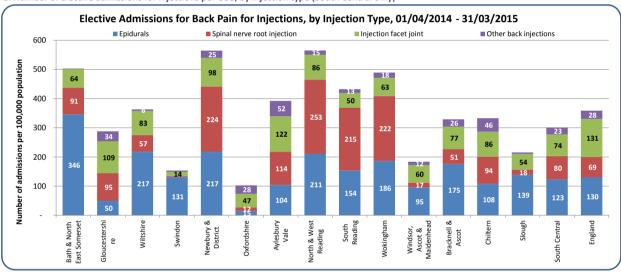

## CCG activity by back pain procedure group

10. Elective hospital admissions for low back and radicular pain in people aged 16 years and over (April 2014 - March 2015)

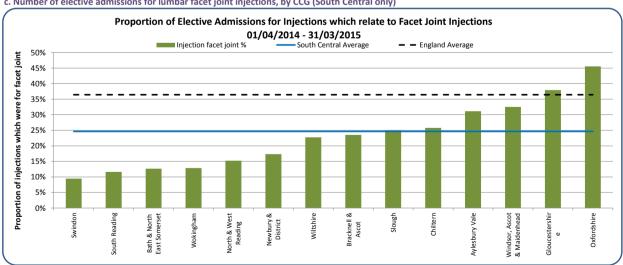

a. Number of elective admissions for surgery per CCG, by surgery type (South Central only)

b. Number of elective admissions for injections per CCG, by injection type (South Central only)

c. Number of elective admissions for lumbar facet joint injections, by CCG (South Central only)

## What is the data telling us?

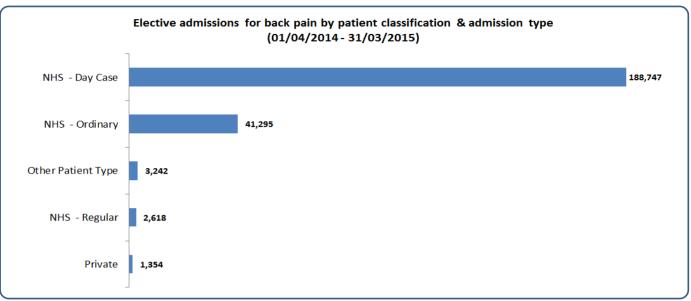

Chart 10a shows the range in the activity rate per 100,000 relating specifically to elective admissions for surgery, by type of surgery, for the South Central CCGs, with chart 9b showing the same for injections.

Five CCGs have higher rates for all surgery combined compared to England with Wiltshire CCG and Newby & District CCG having notably higher rates of fusion compared to both the South Central and England rates

Six CCGs have higher rates for all types of injections compared to England rates. Proportion of lumbar facet joint injections vary from 9% at Swindon CCG to 46% at Oxfordshire CCG.

11. Hospital admissions for low back and radicular pain in people aged 16 years and over (April 2014 - March 2015)

a. Elective admissions for back pain by patient classification and type, all providers

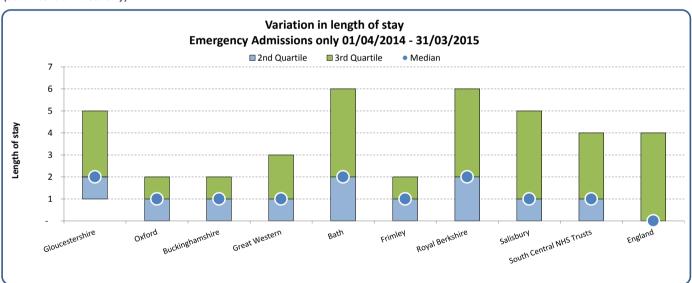

Other Patient Types are Amenity patients and Category II patients, and where the Administrative Category is unknown.

b. Elective admissions for back pain, average length of stay by provider

67% of elective admissions for back pain are day cases, therefore the range in length of stay has not been calculated.

c. Emergency admissions for back pain, average length of stay by provider (South Central Trusts only)

## What is the data telling us?

Over 98% of elective admissions for back pain in the current data extraction relate to NHS patients, with just over 0.5% relating to private patients.

The boxplot indicates the variation in length of stay for emergency admissions to the South Central Trusts and shows that all Trusts have a higher median length of stay (ranging from 1 to 2 days), compared to the England rate of zero days.

## **Hospital Trust Activity Total Costs**

12. Total costs to the commissioner for hospital admissions for low back and radicular pain in people aged 16 years and over (April 2014 - March 2015)

a. Total Costs by Admission Method Type (South Central FTs only)

| Provider Name   | Ele | ective     | Em | ergency   | Oth | er      | To | tal        |
|-----------------|-----|------------|----|-----------|-----|---------|----|------------|
| Frimley         | £   | 4,847,361  | £  | 967,824   | £   | 28,612  | £  | 5,843,797  |
| Oxford          | £   | 3,074,354  | £  | 852,120   | £   | 131,600 | £  | 4,058,074  |
| Royal Berkshire | £   | 2,815,445  | £  | 489,875   | £   | 6,143   | £  | 3,311,463  |
| Gloucestershire | £   | 2,055,964  | £  | 568,249   | £   | 2,217   | £  | 2,626,429  |
| Buckinghamshire | £   | 2,091,169  | £  | 290,480   | £   | 2,476   | £  | 2,384,125  |
| Salisbury       | £   | 1,580,470  | £  | 372,849   | £   | 1,272   | £  | 1,954,590  |

## What is the data telling us?

Across all South Central Trusts in 2014/15 the total cost to commissioners for back and radicular pain admissions was almost £22.6 million, with 80% of the costs attributed to elective activity.

The surgery procedures group accounts for almost 48% of the total cost of all procedures, and the cost of injections is an additional 24% of the total.

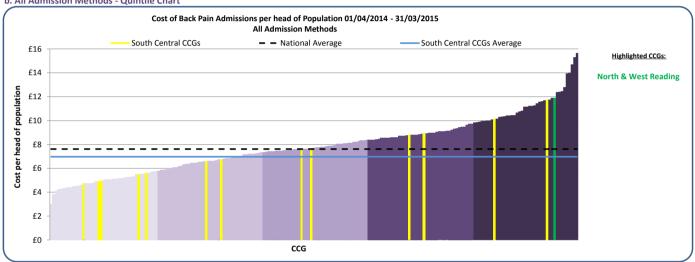

## **CCG Activity Total Costs**

13. Hospital admissions Total Cost for low back and radicular pain in people aged 16 years and over (April 2014 - March 2015)

## What is the data telling us?

There is wide variation across the CCGs in South Central in cost per head of population for admissions related to back and radicular pain.

North and West Reading CCG has the highest spend per head of population regionally (£11.92) driven mainly by high costs for elective admissions. Bath and North East Somerset CCG has the lowest costs per head for both emergency and elective admissions (£4.73) in the region as well as being in the lowest quintile nationally.

The final table shows the total spend for elective admissions for each CCG for 2014/15 (based on national tariff) and includes a breakdown of this spend by procedure type. Surgery generally accounts for the majority of spend, and this is consistently seen across all CCGs in South Central region.

| CONFIDENTIALITY CHECKLIST – FOR                         | COMPLETION PRIOR TO ANY DRAFTS SENT TO CLIENTS  |
|---|---|
| Does the report include any small numbers?              | Yes   |
| If yes, can we produce a meaningful suppressed version? | Yes, the small numbers in this report have been suppressed. Observed events less than 6 have been replaced by "<6". Rates where the numerator or denominator are less than 6 have been shown, although to calculate that small number would not be possible from the data shown here. |
| If not, the Epidemiologist AND Director must            |   |
| justify why not here, highlight, and agree the need     |   |
| for an NDA  |   |
| Have Lightfoot/HSCIC approved use of NDA in             |   |
| order to disclose small numbers?                        |   |
| Has the recipient of the report signed the NDA?         |   |
